Precautions

- Do NOT scale the logo to be smaller than 0.75 inches in height.

- Always surround the logo with a minimum of .15 inches of space.

- Do NOT move text from current location within graphic. Treat all elements as one piece, and keep relationships fixed.

- Do NOT change or typeset text.

- Do NOT change or remove elements, including colors, text, or illustrated aspects.

- Do NOT distort the shape of the logo by “stretching” or “squeezing” the design. Always scale logo proportionally by adjusting the width and height simultaneously.

File Formats

- EPS (.eps) for use in print, especially for oversized or design (e.g. Adobe Creative Suite) files, and for merchandise impressions requiring a vector file with fonts converted to outlines.
- PNG (.png) for use in print or web, especially best for Microsoft Office applications. However, because of the lack of support for the CMYK color space, and the fact that there can be no color separations, the PNG file is not a good fit in a print production cycle.
- JPEG (.jpg) for typical, everyday use in Word documents or to upload to webpages. These logos will have a white background, so use them accordingly.
